

## **Chily Software Asset Management**

### **Ease Up Software License Management**

One stop solution for software lifecycle management and license compliance fulfillment.

## Overview

*Powerful tool to streamline Software Lifecycle Management and meet license compliance requirements ...*

Preventing an organization from license compliance violation is the prior responsibility of an administrator. However, managing number of software assets and maintaining updated information about their status is not an easy task. Mismanagement of software assets automatically leads to unintentional usage of unauthorized software, as no information is available to prevent it.

Chily Software Asset Management is the solution that let administrators feel quite relaxed, as it paves their way to successful management of software at every stage of their lifecycle. Once all available software licenses are strategically managed, all chances of unauthorized software usage can be abolished.

Basically, this software is tailored for administrators, who spend hours on asset management but in spite of putting earnest efforts, fail to meet software compliance requirements. This software helps administrators by providing them with a competent tool to simplify the software asset management complexities.

## Features

Chily Software Asset Management is embedded with exclusive asset management features, which make this software extraordinary. Features of this Software Asset Management tool are:

- Easy software lifecycle management.
- Management of all software licenses from a centralized location.
- Fast and expedient detection of unauthorized software.
- Fulfillment of software license compliance requirement.
- Quick overview of enterprise-wide deployed software.
- Effective Network Asset Management.
- Free demo version available.

## How Chily Software Asset Management can help you?

- It helps you to maintain software licenses' record automatically.
- It tracks all available, used, unused, expired and free software from a centralized location. No need to perform any task manually.
- Helps to avoid use of unauthorized and expired licenses and prevent your organization from violating license compliances.
- Enables you to use every software license in the most beneficial manner even at every stage of its lifecycle.
- Makes it easy to know the exact status of all software available and deployed within the organization.
- Helps to prevent overbuying of software and lets you make prolific and cost effective decisions regarding next software purchase.

## Key Functions
