

Lepide Active Directory Cleaner

Get rid of dormant user and computer accounts from Active Directory automatically.

Lepide Active Directory Cleaner simplifies detection of obsolete accounts before they become a threat to your organization. It gives you a list of inactive accounts, never logged on accounts, and real last logon details of accounts. Based on this information, you can reset passwords, plus you can delete, disable, and move inactive accounts to another OU.

Find and remove inactive accounts automatically

Define inactivity period to consider accounts as inactive and obsolete. Remove, disable, or move them to another OU automatically as per your organization's policy.

Clean and secure your Active Directory

Secure your Active Directory by automating tasks like resetting passwords of dormant accounts, and disabling, moving or deleting them.

Insightful reports

Get reports on inactive accounts, never logged on users, and real last logon details in CSV, HTML, and PDF format.

Highlights

- Save time, effort, and resources that go into manual cleaning
- Schedule cleanup to run periodically
- No need to search dormant, obsolete accounts manually
- Prevent account misuse of the employees who are no longer part of the organization
- Improve Active Directory's performance
- Stay compliant with industry regulations

"Lepide Active Directory Cleaner is simple and very affordable solution for AD cleaning automation. You will save time and money, increase security, plus you will have one less task when preparing for IT Audit."

-Erik Blum (Editor at itsmdaily.com)

Dashboard for quick overview

On the dashboard you get an overview of all the inactive accounts. It displays list of the accounts that are inactive for last 30, 60, and 90 days.

Manage inactive accounts

- ✓ Delete obsolete accounts
- ✓ Reset password of dormant accounts
