

# **LepideAuditor for File Server**

Keep a close watch on all Windows File Servers and NetApp Filers in the network. Track who made what changes in which File, Folders, Permissions and Shares and from where...

### **Overview**

LepideAuditor for File Server is a multi-platform auditing tool to audit Windows File Servers and NetApp Filers. It gives complete details about who made the change, what was changed and from which workstation change was done. This ensures security of Windows File Server and NetApp's environment and adherence to compliance such as PCI, GLBA, HIPAA, etc. Now, you no longer need to analyze logs that may be cluttered around File Servers; instead get all change data at one central repository where it is easy to manage and store for longer period of time to meet compliance requirements and perform forensic analysis. Software also generates alerts in real time about critical changes through multiple mediums like email, SMS and Onscreen-alerts and protects File Servers against unauthorized access, potential threats, and deceitful changes in permissions; changes to files, shares, folder structures, permissions and other items. It offers comprehensive reports and allows you to perform requirement-centric auditing on the basis of different variables such as File server name, Monitoring Time, Drive, Directory, File Name, File Type, Process and Events.

## **Key Features of LepideAuditor for File Server**

- A composite platform for Windows File Servers and NetApp Filers auditing.
- Who, What, When and Where information for each change with before and after value.
- Get real time alerts on sensitive changes by a variety of mediums like email, SMS and on-screen messages.
- Centralized repository of all File server logs in a secure SQL server database for long term archiving and better log management.
- Filter predefined reports on the basis of various parameters such as Date/Time, File Server Name, User Name, Event Name, Event Status and Process Name.
- Create Custom reports to meet specific requirement.
- Export generated reports in .DOC, .PDF, HTML and .TXT file formats for portability and future reference.
- Schedule reports for automatic generation and delivery to specified email address.
- Group reports on the basis of different parameters such as Date, User, Computer and Event.
- Track changes made to Shares and Permissions for all objects in all Windows/Net App File Servers in the network.
- Software has intuitive and easy-to-work-on GUI that makes File Server auditing interesting and easy to perform.

### **Benefits of LepideAuditor for File Server**

- Complete audit of all Windows/NetApp File Servers in the network to satisfy Compliance requirements like PCI, GLBA, HIPAA, etc.
- Create Safe and Secure File Server environment by preventing security breaches and unauthorized access.
- Streamline auditing with a number of parameters such as Time Span, File Server, File Mask, Process, User, Event, and Directory.
- Save time and cost involved in performing native auditing.
- Maintain a centralized repository of all File Servers' data in secure SQL Server database for years to perform forensic analysis.
- Keep a tab on important Files, Folders, their permissions and other resources and get notified instantly incase of security breaches.
- Clear and absorbable information in the Who, What, When and Where format for total visibility.

### **System Requirements**

#### **Basic System Requirements**

- Pentium Class Processor
- 2 GB RAM
- 200 MB free space for software installation
- Enough disk space to save File Server logs

#### **Supported Windows Operating system**

- Windows 7
- Windows Vista
- Windows XP
- Windows 2000 Professional

#### **Supported Windows Server**

- Windows Server 2012 R2
- Windows Server 2012
- Windows Server 2008 R2
- Windows server 2008
- Windows Server 2003
- Windows Server 2000

#### **Supported SQL Server Versions**

SQL Server 2000 to SQL Server 2014

(Including Express editions)
