1. Introduction

Lepide Active Directory Self-Service provides a comprehensive means of providing automation for the necessary tasks related to manage the Active Directory in an organization.

GINA/CP helps you to access LADSS functionalities through the login screen. It allows users to easily unlock account or reset password directly from the lock screen. However, the GINA/CP installer has to be installed at client systems to avail the benefits.

The GINA/CP installer can be deployed at client systems through two ways:

1. **Direct installation at client systems**: Installation at individual systems
2. **Through GPO**: For bulk installation
3. **Remote Installation of Agents**: Select computers to install the agents.

If you have any questions at any point in the process, you can contact our Support Team. The contact details are listed at the end of this document.

2. Direct Installation at Client Systems

Follow the below mentioned steps to set up GINA/CP at individual client systems:

1. Login to LADSS admin section.
2. Click on “Configuration” tab and go to GINA/CP Installer page.
3. Download the GINA/CP Installer file.
4. Double-click the installer file and accept the license agreement after reading it.
5. Click “Next.”
6. The Web Server Information page will open. You need to make changes in this section as per your network.
7. Click “Next; and follow the simple screen instructions to install it directly at individual client systems.

**NOTE:** Perform the following steps on the Web Server Information page.

- Enter the Web Server URL where LADSS is installed instead of local host.
- Enter the selected Port Number in case it has been changed while installing LADSS.
- If LADSS is installed in a secure network, then change “http” to “https.”

Check the following image.
3. Installation through GPO

GINA/CP can be deployed over network wide systems at one go through a customized group policy. The group policy can be applied at:

- Computer startup/shutdown
- User logon/logoff

We recommend you to create it for computer startup/shutdown (however, it includes some extra steps).

3.1 Install through a Group Policy at Startup/Shutdown

Follow the below mentioned steps to get GINA/CP activated through GPO on a particular domain:

In LADSS admin section, go to the GINA/CP Installer page and download it.
In the following steps, you will find how to:

- Create a Security Group
- Create a Group Policy
- Perform Administrative Template Settings
- Applying the GPO

### 3.1.1 Create a Security Group

2. Right-click on any OU, select “New” and click “Group” to create a new group.
3. Provide group name in the respective fields.
4. Select group scope as “Global” and group type as “Security” (these are default settings).
5. Click “OK.”
6. The new group will be reflected under the respective section. Double-click on it or right-click and open “Properties.”

![Figure 4: Option to view the properties of security group](image)

7. Select “Members” and click “Add” to add all the computers where you want to deploy GINA/CP settings.

![Figure 5: Add Computers as the Group Members](image)

8. Click “OK”, once you have added the computers.

In the next section, you will how to create a Group Policy add script at Computer Startup/Shutdown.

### 3.1.2 Create a Group Policy

1. Now go to “Administrative Tools” and open “Group Policy Management.” (Execute “gpmc.msc” on Run or Command Prompt to access it.)

2. Under Group Policy Management, select the domain where GINA/CP settings are to be activated and right-click on it to create a new GPO.

![Group Policy Management](image)

**Figure 6: Option to create a Group Policy**

**NOTE:** You can create a new Group Policy on OUs as well instead of a domain.

3. Provide a name to the new Group Policy and click “OK.”

![New GPO](image)

**Figure 7: Create GPO**
The new GPO will be listed under the current domain.

4. Right-click on it and select “Edit.”

5. “Group Policy Management Editor” opens automatically and the new GPO will be highlighted.

7. Navigate to “Windows Settings”, expand the node and click on “Scripts (Startup/Shutdown),”
8. Double-click ‘Startup’ to access its properties.

**Figure 9: Start/Shutdown Scripts**

**NOTE:** The script can be inserted either at Startup or during Shutdown. Here, we are performing it at startup.

9. Click “Show Files” to access its window that shows the details regarding the script files stored in this Group Policy Object.

10. Now, copy the GINA/CP installer file (from the downloaded location) to here.

**Figure 10: Properties of the Startup Script**
11. Close the window.
13. Click “Browse” and select the GINA/CP installer file. The setup file will be selected in “Script Name” text field.
14. Provide script parameters by typing ‘/VERYSILENT’ and provide the URL from where LADSS is being accessed after leaving a single space.
   Example URL: http://192.168.10.178:7777/LADSS/UserActions.jsp
15. Click “OK.”
16. The script will be successfully added.

![Startup Properties](image)

Figure 13: Added the startup script

17. Click “Apply” and “OK” to complete the process.

This is how you can create a Group Policy for deploying GINA/CP installation at all added client systems. However, before updating the Group Policy, you need to configure few ‘Administrative Template Settings’ as shown in the next section.

### 3.1.3 Administrative Template Settings

Perform the following steps.

1. In the same Group Policy Management Editor section, under Computer Configuration, expand Policies, navigate to Administrative Template section and expand it in the following order.
   
   Computer Configuration → Policies → Administrator Templates → System

2. Navigate to ‘System’ and expand it.

3. Under ‘System’, navigate to “Group Policy” and double-click “Group Policy slow link detection.”
4. Double-click it to select its properties.
5. Select “Enabled.”
6. Click “Apply” and “OK.”
7. In “System”, now navigate to “Logon.”
8. Double-click ‘Always wait for the network at computer startup and logon’ and enable it the same way.

9. Finally navigate to ‘Scripts’ in “System”.

Figure 16: “Always wait for the network at computer startup and logon” policy
10. Double-click “Run logon scripts synchronously” and enable it.
11. Double-click “Maximum wait time for Group Policy scripts” and enable it.

That is it; the required administrative template settings will be successfully configured. The last section deals with GPO application.

3.1.4 GPO Application

The next process is to apply the created GPO to the desired computers within the network.

1. In the same ‘Group Policy Management Editor’ section, right-click on the newly created Group Policy and click ‘Properties’. 
2. In “Properties” dialog box, click “Security” tab.
3. Select “Authenticated Users” and enable “Read” checkbox.
4. (Important) Now, uncheck “Apply Group Policy” checkbox.
5. Leave rest all checkboxes as it is.
6. Click “Apply.”
7. Now, click “Add” and enter the name of the security group created at the first step.

8. Click “Check Names” to authenticate entry of correct group.

**NOTE:** If you face trouble in manually entering the group name, you can use the ‘Advanced’ tab to explore the group name.

9. Click “OK.”

10. The added group will be reflected under “Security” tab.

11. Now select the group, enable ‘Read’ and ‘Apply Group Policy’ checkbox.

12. Click “Apply” and “OK.”

13. Now, the final step is to update the Group Policy.

14. Execute “gpupdate” command on Run or Command Prompt.

15. Restart all the client systems where the GPO is to be applied.

Once the client systems reboot, you can find ‘Reset Password/Unlock Account’ link appears on the Windows logon screen. Thus, you can successfully deploy GINA/CP through GPO at computer startup/shutdown.
3.2 Install through Group Policy at User Logon/Logoff

This is an alternate way to install the GINA/CP installer files at client systems through user logon/logoff. This procedure involves less steps; however, there is a drawback. The script will be executed only when users who have administrative rights logon or logoff to the respective client systems.

The steps are almost similar for creating the GPO and adding script. To deploy GINA/CP through this method, follow the below mentioned steps:

1. In LADSS admin section, go to GINA/CP Installer page.
2. Download the GINA/CP Installer and configure it on Domain Controller. Do it by simply pasting the installer file in the public folder of the server where LADSS is installed.
3. Now go to 'Administrative Tools' and open 'Group Policy Management'.
4. Under “Group Policy Management”, select the domain where GINA/CP settings are to be activated and right-click on it to create a new GPO.

![Figure 20: Option to create a GPO](image)

5. Provide a name to the new GPO and click “OK.”
6. Right-click on it and select “Edit” to access “Group Policy Management Editor.”

7. Go to 'User Configuration', and expand 'Policies' folder.

8. Double-click ‘Logoff’ and the logoff properties wizard will open up.

   **NOTE:** The script can be inserted at either Logon or Logoff but it is preferable to activate the script at logoff.

9. Click 'Add' to open up the script addition window
10. Provide complete path of the installer exe file in the Script Name text field

**NOTE:** If LADSS is installed at a client site, then provide the IP address of the system where GINA/CP scheduler exe was placed in the public folder.

11. Provide script parameters by typing ‘VERYSILENT’ and provide the URL from where LADSS is being accessed. (Example URL: http://192.168.10.195:7777/LADSS/UserActions.jsp)

12. Click “OK.”
13. The script will be successfully added.

![Logoff Properties](image)

*Figure 25: Added the logoff script*

14. Click ‘Apply’ and then ‘Ok’ to confirm.

15. Now, the final step is to update the Group Policy. Go to Run or Command Prompt, enter ‘gpupdate’ and hit enter.

16. Logoff and then Login all the client systems where the GPO is to be applied. In case, the GPO is not updated, reboot the client systems.

4. Remote Installation of Agents

Perform the following steps

1. Go to "Configuration" tab and select "GINA/CP Installer".
2. Select "Remote Agent Installation" option from the drop-down menu.
3. Select the domain where you want to install the agent(s).

4. Click "Add" to access the menu.

5. This menu contains the following three options. You can select anyone to add the computers for installing agents on them. Let us have a look at these options.

   A. **Specific Computer**: This option lets you add the computer directly by providing its name or IP Address. Selecting it will display the following pop-up.
Perform the following steps.

i. Type the name or IP Address of the desired computer.

ii. Click "Add" to add this computer. The computer is added to the list below.

iii. You can add multiple computers.

iv. Click "OK" once you are done. This will take you back to the previous screen of remote agent installation, which will now display the added computers.

B. IP Address: This option lets you add the computers between the provided IP address range.

Perform the following steps.

i. Enter the start and end IP Address.

Figure 28: Add Computers through IP Address range
ii. Click "Ok" to add the computers of which IP Addresses fall between the specified range. It takes you back to the previous screen of remote agent installation, which will now display the added computers.

C. **Computer Discover from AD**: This option lets you add the computers from Active Directory. Clicking it will display the list of all available computers in Active Directory.

![Add Computers from AD](image)

**Figure 29: Add computers from Active Directory**

Check the computers where you want to install the agents and click "Ok". It takes you back to the main screen, which will now display the list of added computers.

6. While adding the computers using any of the above methods, if any computer(s) is/are already added then software will display the following message. The remaining computer(s) not added already will be added.

![Computer already exists](image)

**Figure 30: Computer already exists in the list**

7. Once you have added the computers, now you can select the exact computers to proceed with installation.
8. You can right click on any entry in the list to access the context menu, which has the following options.
   a. Install Agent: This option lets you install the agent(s) on the selected computer(s).
   b. Uninstall Agent: This option lets you uninstall the agent(s) from the selected computer(s).
   c. Remove item(s): This option lets you remove the selected computer(s) from the list. Follow the steps below to remove the items.
   d. Select all item(s): This option lets you select all computers at once.
   e. Deselect all item(s): This option lets you deselect all computers at once.

9. Click the computers in the list to select them.

10. Click "Install" button. Alternatively, you can right click and select "Install Agent" option. It starts the agent installation process.
You can click "Stop" to cancel the current process.

11. This will start the process to install the agents on the selected computers. Once completed, the following message box appears on the screen.

![Figure 32: Installing GINA/CP Agents](image)

 Operation successfully completed.

![Figure 33: Agents has been installed.](image)

**NOTE:** To uninstall the agent, you have to select the computer(s) from the list and do a right click.
5. Conclusion

Using this process, GINA/CP can be activated on any domain server. Now, users will get an option to ‘Reset Password/Unlock Account’ directly at their logon screen (as shown below).

![Log On to Windows Screen](image)

Domains users just need to click on the respective option to perform the required task.
