Lepide

HOW LEPIDE IS HELPING GOVERN ACCESS TO DATA

Our client is a large school district in the USA. We have happily accommodated their request for anonymity.

CASE STUDY

DISCOVERY

ACCESS RIGHTS

The Company had no visibility over who can access sensitive data and how users are being granted access.

CHANGES

The Company had no way to automatically detect when permissions were changing.

PRIVILEGE ABUSE

The Company had no way to determine whether users' access rights were excessive based on their data usage.

ACTION

DEPLOYMENT

The Company chose to deploy Lepide Data Security platform and undergo a complimentary risk assessment.

SUPPORT

The Lepide support team did all the heavy lifting configuring the solution to the Company's exact requirements.

ALIGNMENT

Lepide set up the solution with the required reports, threat models, and dashboards configured for access governance.

OUTCOME

Lepide enabled the Company to see who had effective permissions to what data and how that access was granted. Reporting for users with excessive permissions enabled the Company to identify areas of risk and revoke access. Lepide set up threat models to automatically spot and react to permission changes, escalations and more. As a result, the Company chose to become a customer of Lepide, and with ongoing support, are able to demonstrate improved access governance and reduced risk of privilege abuse.
