

About the customer.

Western Connecticut Health Network

Western Connecticut Health Network (WCHN) is a large healthcare organization based in Connecticut, USA, employing approximately 10,000 staff and processing significant volumes of protected health information (PHI).

Operating in a heavily regulated environment, WCHN needed stronger visibility into Active Directory changes, privileged user activity, and configuration modifications to support HIPAA compliance requirements

The challenge.

WCHN was using Quest Active Administrator to audit and report on Active Directory activity, but the security team began experiencing issues with the accuracy and depth of the information being generated.

The existing solution lacked:

- Detailed visibility into AD and Group Policy changes
- Reliable real-time alerting
- Clear before-and-after change tracking
- Efficient monitoring of privileged user activity
- Reporting robust enough to support HIPAA requirements

As a result, the team struggled to confidently investigate changes and maintain the level of auditability required within a healthcare environment handling sensitive patient data.

The solution.

WCHN selected the Lepide Data Security Platform to improve visibility across Active Directory and strengthen compliance reporting. With Lepide, the security team gained:

- Real-time alerts on Active Directory and Group Policy changes
- Clear visibility into configuration and permission modifications
- Before-and-after values for easier investigations
- Improved monitoring of privileged user activity
- Logon and logoff auditing capabilities
- Access to pre-built reports aligned to HIPAA auditing requirements

The solution was deployed quickly and began delivering value immediately after implementation.

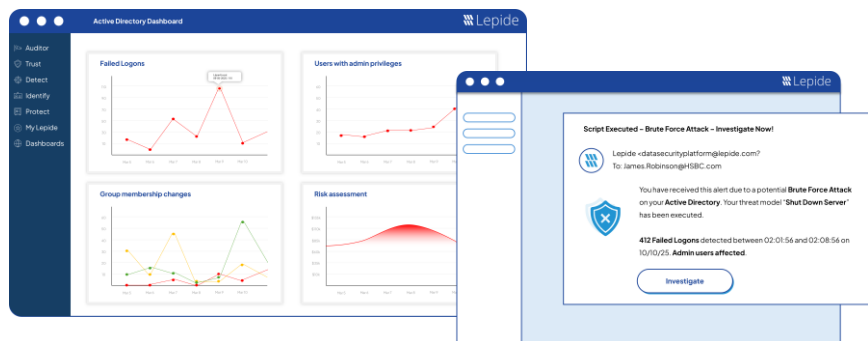

Key security outcomes.

Benefit	Impact
Improved AD Visibility	Real-time insight into changes across Active Directory and Group Policy
Faster Investigations	Before-and-after change tracking simplified security investigations
Enhanced Compliance Reporting	Pre-built HIPAA-focused reports reduced manual auditing effort
Better Privileged User Monitoring	Improved oversight of high-risk user activity
Operational Cost Savings	Replaced an existing legacy solution while improving functionality

What the customer said.

“Lepide is straightforward to use and effective right off the bat. Plus, the level of patience, attentiveness and technical knowhow is far beyond most support and sales teams I’ve seen before.”

Drayke Jackson, Security Engineer, WCHN
