1. Introduction

Data protection is the process of safeguarding important information from corruption, compromise, or loss. The importance of data protection increases as the amount of data created and stored grows and data growth continues to grow at unprecedented rates. Another key component of data protection is ensuring data is always accessible to those that need it. We provide a huge amount of value for organizations with data protection initiatives by bringing together reports and alerts combining users, data and controls to detect threats and reduce risk. Our approach is unique due to our in-depth knowledge of where most corporate data is currently stored – Windows File Servers, OneDrive, M365 and through our understanding as to how users are gaining access to the data – Active Directory.

2. Aligning Lepide for Data Protection

There are a number of key questions that you need to be able to answer to be able to protect your data, detect, investigate and respond to threats.

In the below table, we align Lepide technology to these questions:

Category	Actions to Take	Technology to implement	
Prevent	Spot over exposed sensitive data.	Inactive Users Report (Lepide Audit)	
		Excessive Permissions by User Report (<u>Lepide Trust</u>)	
		Excessive Permissions by Object Report (<u>Lepide Trust</u>)	

Lepide USA Inc.

			Permissions by User Report (<u>Lepide Trust</u>)
			Users with Admin Privileges Report (<u>Lepide Trust</u>)
			Open Shares Report (<u>Lepide</u> <u>Trust</u>)
		Q	Data Classification (<u>Lepide</u> <u>Identify</u>)
			Increased Threat Surface Area Threat Model (<u>Lepide</u> <u>Detect</u>)
			Permissions Escalation Threat Model (Groups) (Lepide Detect)
			Permissions Escalation Threat Model (File) (<u>Lepide</u> <u>Detect</u>)
			Permissions Escalation Threat Model (Folder) (Lepide Detect)
	Identify what data you need to protect first and why.	@	Data Classification (<u>Lepide</u> <u>Identify</u>)
		@	Classified Files Reports (<u>Lepide Identify</u>)
		Q	Classified Emails Reports (<u>Lepide Identify</u>)
			Classified SharePoint Objects Reports (<u>Lepide</u> <u>Identify</u>)
		@	Classified OneDrive Objects Reports (<u>Lepide Identify</u>)
		Q	Classified Dropbox Objects Reports (<u>Lepide Identify</u>)
			Open Shares Report (<u>Lepide</u> <u>Trust</u>)

	Prevent threats by limiting access to data.		Users with Admin Privileges Report (<u>Lepide Trust</u>)
			Permissions by User Report (<u>Lepide Trust</u>)
		9	Inactive Users Report (<u>Lepide Audit</u>)
			Excessive Permissions by User Report (<u>Lepide Trust</u>)
			Permissions Escalation Threat Model (<u>Lepide</u> <u>Detect</u>)
			Data Classification (<u>Lepide</u> <u>Identify</u>)
Detect	Detect compromised data	9	All Modifications in File Server Report (<u>Lepide Audit</u>)
			Anomaly Spotting (<u>Lepide</u> <u>Detect</u>)
			Any Threat Model Triggered (Lepide Detect)
			External Data Sharing O365 Report (<u>Lepide Audit</u>)
		9	All SharePoint Modifications Report (<u>Lepide Audit</u>)
			SharePoint Online Modification Report (<u>Lepide</u> <u>Audit</u>)
		Q	Active Directory Permissions Modifications Report (<u>Lepide</u> <u>Audit</u>)
		9	All Exchange Server Permissions Modifications Report (<u>Lepide Audit</u>)
		9	All SharePoint Online Permissions Modifications Report (<u>Lepide Audit</u>)
		9	All SharePoint Permission Reports (<u>Lepide Audit</u>)

			Mailbox Accessed by Non- owners Report (<u>Lepide</u> <u>Audit</u>)
Investigate	Identify what sensitive data that was affected by an incident or a breach	Q	All Modifications in File Server Report (<u>Lepide Audit</u>)
		9	Files Renamed Report (<u>Lepide Audit</u>)
		Q	Read Failed Report (<u>Lepide</u> <u>Audit</u>)
		@	All Environment Changes Report (<u>Lepide Identify</u>)
			Sensitive Data Classification Report (<u>Lepide Identify</u>)
Respond	Detect and respond to incidents that may lead to the compromise or loss of data		Any Threat Model Triggered (Lepide Detect)

3. Lepide Core Capabilities

3.1. - Lepide Identify

Automatically scan, discover and classify data at the point of creation to help you stay on top of where your sensitive data is located. Remove false positives with proximity scanning technology. This helps to improve the accuracy even further than most classification solutions. Categorize and score data based on compliance, risk, occurrence, monetary value, and more to stay on top of your most sensitive data.

In Summary:

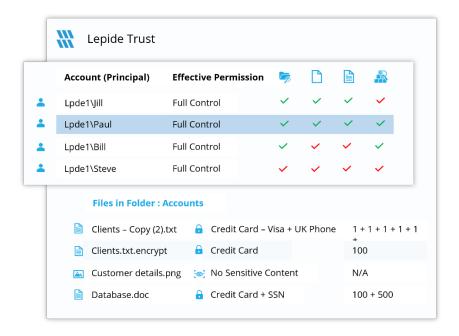

- Discover and classify data in real Tag data.
- Data valuation.
- Identify data most at risk.

For More Information:

https://www.lepide.com/data-security-platform/data-classification.html

3.2. - Lepide Trust

Report on who has access to your most sensitive data and how they were granted that access. Specific reports for users with excessive permissions enable you to spot which users are most likely to be insider threats. Maintain your zero-trust policy by spotting when permissions change and reversing them.

In Summary:

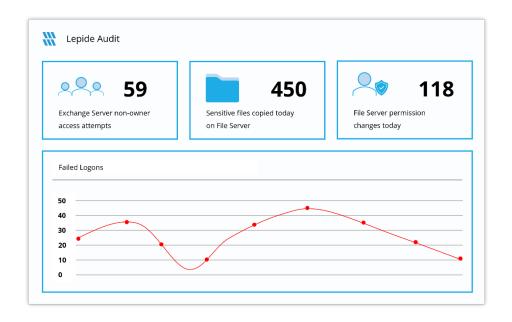

- Analyze permissions.
- Identify over privileged employees (least privilege).
- View historic permissions.
- Track permission changes.

For More Information:

https://www.lepide.com/data-security-platform/permissions-and-privileges-analysis.html

3.3. - Lepide Audit

Audit, report and alert on changes being made to sensitive data and your hybrid environment. Roll back unwanted changes and restore deleted objects to maintain system integrity. Track any changes and modifications users are making to critical files and folders.

In Summary:

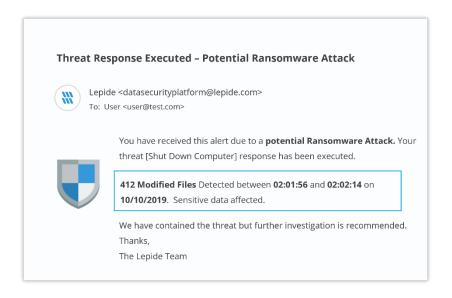

- View interactions with data.
- View interactions with systems governing access to data.
- Employee audit logs.
- Investigate incidents and breach scenarios.

For More Information:

https://www.lepide.com/data-security-platform/audit-and-report-changes.html

3.4. - Lepide Detect

Machine Learning backed anomaly spotting technology will allow you to determine when one of your users becomes an insider threat. Hundreds of threat models, tailored to specific data security threats, generate real time alerts when the security of your data is in jeopardy. Automated threat responses can be triggered to perform threat mitigations, such as shutting down an affected computer or server.

In Summary:

- Detect threats in real time with pre-defined threat models.
- Baseline/profile employee behavior.
- Identify anomalous employee behavior.
- Alert and respond to threats in real time.

For More Information:
