1. Introduction

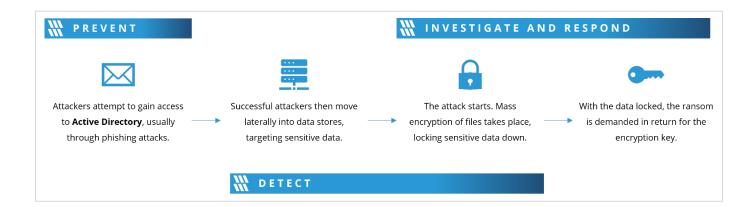

Digital transformation, among other things, involves migrating the organization's data to a digital form. This enables organizations to be more agile and productive.

While the pandemic expedited the initiative to facilitate home workers, in many cases productivity was chosen at the expense of security with little or no processes or controls put in place for the best way to manage and secure the data. Organizations are now retrospectively putting security measures in place around their data which we are well placed to help with.

One of the key challenges organizations are trying to solve is how to get visibility over what's happening to their data. Due to our unique and deep insights into how Windows based file systems work we're able to deliver on this on many levels. We can offer accurate, detailed information on what's happening to data right now, who has what levels of access and where sensitive data is being used in the business.

2. Aligning Lepide for Digital Transformation

There are a number of key questions that you need to be able to answer to be able to align the Lepide Data Security Platform for Digital Transformation.

In the table below, we align Lepide technology to these questions:

Actions to Take	Technology to Implement
See who has access to sensitive data.	Users with Admin Privileges Report (Lepide Trust) Permissions by User Report (Lepide Trust) Inactive Users Report (Lepide Audit) Excessive Permissions by User Report (Lepide Trust) Open Shares Report (Lepide Audit) Data Classification (Lepide Identify) Permissions Remediation (Lepide Protect)
See what remote workers are doing with sensitive data.	Permissions by User Report (Lepide Trust)Users with Admin Privileges Report (Lepide Trust)Open Shares Report (Lepide Audit)Data Classification (Lepide Identify)File Server Modification Reports (Lepide Audit)SharePoint Online Modification Reports (Lepide Audit)OneDrive Modification Reports (Lepide Audit)MS Teams Modification Reports (Lepide Audit)
	External Data Sharing O365 Report (<u>Lepide Audit</u>) Mailbox Accessed by Non-owners Report (<u>Lepide Audit</u>) Files Renamed Report (<u>Lepide Audit</u>) Read Failed Report (<u>Lepide Audit</u>) All Environment Changes Report (<u>Lepide Audit</u>)
See what data the organization has that's sensitive.	Data Classification (<u>Lepide Identify</u>) Classified Emails Report (<u>Lepide Identify</u>) Classified SharePoint Objects Report (<u>Lepide Identify</u>) Classified OneDrive Objects Report (<u>Lepide Identify</u>) Classified DropBox Objects Report (<u>Lepide Identify</u>)

See what data we have that is not being used and what you need to migrate.	Stale Data Report (<u>Lepide Audit</u>)
See your most sensitive data.	Data Classification (<u>Lepide Identify</u>) Classified Emails Report (<u>Lepide Identify</u>) Classified SharePoint Objects Report (<u>Lepide Identify</u>) Classified OneDrive Objects Report (<u>Lepide Identify</u>) Classified DropBox Objects Report (<u>Lepide Identify</u>)
How to see what data we need to protect first.	Open Shares Report (<u>Lepide Audit</u>)

3. Lepide Core Capabilities

3.1. - Lepide Identify

Automatically scan, discover and classify data at the point of creation to help you stay on top of where your sensitive data is located. Remove false positives with proximity scanning technology. This helps to improve the accuracy even further than most classification solutions. Categorize and score data based on compliance, risk, occurrence, monetary value, and more to stay on top of your most sensitive data.

In Summary:

- Discover and classify data in real Tag data.
- Data valuation.
- Identify data most at risk.

For More Information:

https://www.lepide.com/lepide-identify/

3.2. - Lepide Trust

Report on who has access to your most sensitive data and how they were granted that access. Specific reports for users with excessive permissions enable you to spot which users are most likely to be insider threats. Maintain your zero-trust policy by spotting when permissions change and reversing them.

In Summary:

- Analyse permissions.
- Identify over privileged employees (least privilege).
- View historic permissions.
- Track permission changes.

For More Information:

https://www.lepide.com/lepide-trust/

3.3. - Lepide Audit

Audit, report and alert on changes being made to sensitive data and your hybrid environment. Roll back unwanted changes and restore deleted objects to maintain system integrity. Track any changes and modifications users are making to critical files and folders.

3.4. - Lepide Detect

Machine Learning backed anomaly spotting technology will allow you to determine when one of your users becomes an insider threat. Hundreds of threat models, tailored to specific data security threats, generate real time alerts when the security of your data is in jeopardy. Automated threat responses can be triggered to perform threat mitigations, such as shutting down an affected computer or server.

Total Reports : 50				First Previous 1	/ 1 Next Last)			50 / page

In Summary:

- Detect threats in real time with pre-defined threat models.
- Baseline/profile employee behavior.
- Identify anomalous employee behavior.
- Alert and respond to threats in real time.

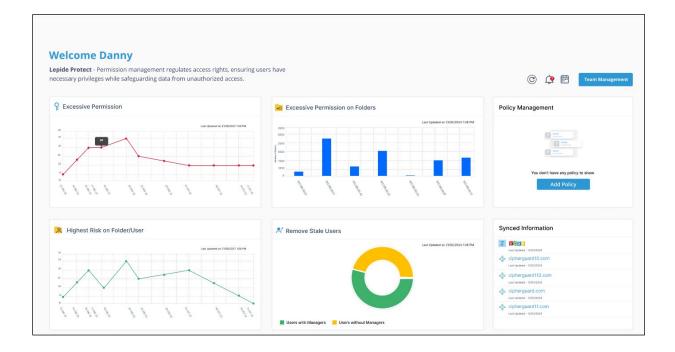

For More Information:

https://www.lepide.com/lepide-detect/

3.5. - Lepide Protect

Reduce the complexity of managing user permissions. The permissions management system within Lepide Protect provides a straightforward and efficient way to manage permissions over all shared locations. It provides clear visibility as to who has access to what, including identifying excessive permissions. Once identified, excessive permissions can be revoked, and inactive users removed; permissions policies can be used to do this automatically.

In Summary:

- Identify and revoke excessive permissions.
- Remove inactive users to reduce your threat surface.
- Delegate permissions management to team leaders.
- Use policy management to automatically revoke permissions.
