

Lepide Active Directory Self Service

Self-service password management

Provide your Active Directory Users with the Power of Self Service

Let them do Self Account Unlock, Self Password Reset, Self Information Update and much more.....

Overview: Lepide Active Directory Self Service

Making sure that all the Employee accounts are active and accessible along with maintaining an up-to-date database with employee's personal, professional and contact information is a must for any administrator. Any locked out accounts until help arrives from the Admin will surely hamper the employee's performance and productivity. To overcome the burden of a few Admins resolving the issues for all the Users and letting the Users resolve their own issues, Lepide Active Directory Self Service was developed.

LADSS enables the employees to update their own information in Windows Active Directory, reset their accounts password and unlock their locked out accounts. After being enrolled in the Lepide Active Directory Self Service software, employees need to answer a few security questions whilst resetting accounts password or unlocking their locked out account. Along with allowing employees to perform self- password reset and self-account unlock, Lepide Active Directory Self Service facilitates employees to take help of their trusted team members for resetting their accounts password or unlocking their locked accounts. password reset and self-account unlock, Lepide Active Directory Self Service facilitates However, to do this, a list of trusted team members needs to be created after logging into the account.

Apart from providing these specified benefits, Lepide Active Directory Self Service keeps the administrator up-to-date on the status of employees account by automatically generating various users' accounts and password related reports. Using these reports, the administrator can know the Users whose password has expired, or the Users whose password is going to expire, how many users are enrolled in the software to avail the self-information and password management related benefits and so on.

Why the software should be used?

Devised to benefit the administrator and the employee, Lepide Active Directory Self Service should be used to avail the following benefits:

- **Self Management** - Enables employees to perform self-password reset, self-information update, and self-account unlock from anywhere within a domain using a Web browser.
- Enables employees to perform self-password reset, self-information update, and self-account unlock from anywhere within a domain using a Web browser.
- **Enhances Employees Productivity**
Saves a substantial amount of time for the employees by eliminating the idle time waiting for the administrator to unlock the locked accounts or reset password. This would in turn help the employees in being more productive by successful utilization of their time to the fullest extent.
- **Saves Administrators Time**
By providing the facility of self-account, password, and information management to the Employees, the software saves a large amount of the administrator's time that is often spent to manage users account, update users' information in Active Directory, and reset users' accounts password.
- **Helps Increase your Return on Investment**
By saving the administrator's and the employees' time, Lepide Active Directory Self Service helps increase return on investment as the saved time is utilized in other aspects.
