Lepide

Active Directory

Lepide Auditor for Active Directory provides detailed audit trails with the critical "who, what, where, and when" audit information for all Active Directory changes and events. Lepide provides detailed state-in-time Active Directory audit reporting so admins can fully understand what their AD looks like. Lepide also tracks user behavior, including logon/logoff behavior and account lockouts.

Audit AD changes and events.

- Our Active Directory audit tool tracks all changes and events with **detailed audit reports and extensive audit trails**. If something happens in your AD, we capture it.
- Track changes being made to **AD objects, Group Policy objects**, infrastructure, containers, OUs, users, computers, groups, contacts, printers, shared folders, and more.
- Track **changes to permissions** in Active Directory, including domain, OU, group, container, and user to ensure you limit permission sprawl.
- All critical audit information is displayed on a single line. Get the critical **who, what, when, and where** auditing information in a single pane of glass.

- Understand the current state of your AD, including your users, group membership, computers, groups, organizational units, empty OUs, and more.
- Get a list of all of your Active Directory domain admins. These users hold the keys to your kingdom.
- Identify users with passwords that have been set to never expire. These accounts are common causes of compliance failure.
- Report on inactive users to help make decisions on cleaning up your Active Directory threat surface.
- Snapshots of configurations at specific points in time aid in tracking changes and ensuring security.
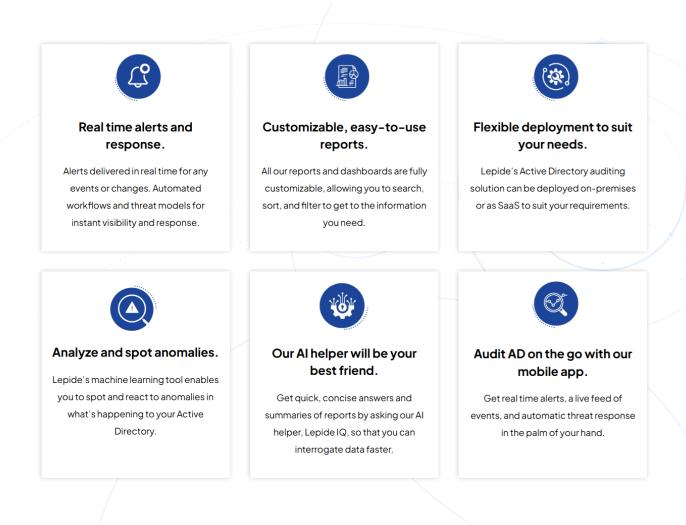

Audit the state of your AD.

- Understand the way your users are logging onto and logging out of Active Directory.
- Improve access controls by getting visibility over failed logon events, concurrent logon sessions, logon history, users logged on to multiple computers, and much more with logon auditing capabilities of our tool.
- Notify admins in real time on a typical user behavior, including login attempts outside of normal business hours.
- Identify potential brute force attacks by analyzing failed login attempts to determine the root cause.
- Investigate account lockouts and identify the source in a matter of seconds.

Real time alerts and response.

Alerts delivered in real time for any events or changes. Automated workflows and threat models for instant visibility and response.

Customizable, easy-to-use reports.

All our reports and dashboards are fully customizable, allowing you to search, sort, and filter to get to the information you need.

Flexible deployment to suit your needs.

Lepide's Active Directory auditing solution can be deployed on-premises or as SaaS to suit your requirements.

Analyze and spot anomalies.

Lepide's machine learning tool enables you to spot and react to anomalies in what's happening to your Active Directory.

Our AI helper will be your best friend.

Get quick, concise answers and summaries of reports by asking our AI helper, Lepide IQ, so that you can interrogate data faster.

Audit AD on the go with our mobile app.

Get real time alerts, a live feed of events, and automatic threat response in the palm of your hand.
