Lepide for

EXCHANGE ONLINE

Summary

As countless emails are sent through Exchange Online that contain business-critical information, it's of the utmost importance that you are able to get insight into any changes being made to configurations and permissions. Enter Lepide Exchange Online Auditor. With numerous pre-defined reports, real time alerts and advanced filters, you can interrogate changes to your Exchange Online environment to ensure that this cloud-platform remains secure.

Analyze Permission Changes

Ensure that you know who your most privileged users are and when permissions change.

Easy to Understand Reports

Overcome the limitations of native auditing through easy-to-read reports that provide instant value.

Schedule and Share Reports

The pre-defined audit reports in Lepide Exchange Online Auditor can be scheduled and shared with selected recipients.

Key Security Features for Exchange Online

Lepide's Exchange Online auditing solution tracks all changes made to Exchange Online permissions. Overcome the limitations of native Exchange Online auditing by providing reports that are readable, actionable and detailed.

Mailbox Permissions Analysis

Analyze permissions across the most critical mailboxes within your organization. Get detail over who has permissions to specific mailboxes, including "Send As" and "Full Access." Monitor and alert when permissions are granted or revoked to mailboxes to reduce the risk of mailbox data being exposed and potential data breaches.

Analyze Permission Changes

Lepide Exchange Online Auditor monitors every change being made in the permissions of Exchange Online. When these changes are detected, alerts can be sent in real-time via emails to selected recipients or push-notifications to the Lepide Mobile App. Continuous permission monitoring allows administrators to take corrective measures whenever unwanted access privileges or administrative rights are granted to any user.

Granular Audit Reports

Lepide Exchange Online Auditor processes raw logs and displays the important information in an easy-to-read report. One record, with answers to the "who, what, when and where" questions, is displayed for a single change. Before and after values for every

change are also displayed in order to give you context. All changes can be analyzed from both text-based reports and graphs.

Easy Report Sharing

Predefined reports can be delivered at periodic intervals through email or saved as a PDF, CSV or MHT file at a shared location. Once saved, users can be notified through email.
