

Google Workspace

As Google Workspace provides access to an organization's most valuable systems and data, it's important to monitor who is attempting to gain access to Google Workspace as well as what they are doing within the array of applications surrounding the most sensitive data within the organization

Track logins.

Understanding the logon activity of business users is critical in getting better insight into how and when your organisations employees are gaining access to your core systems and data. We also help you keep track of failed logins to Google Workspace to better understand if there could be a potential security risk or someone is trying to gain access with invalid credentials.

Track changes to sensitive data.

If you are providing access to your companies most sensitive data through Google Drive, then it's important to understand who interacting with that data. Through creations, deletions, modifications and altering access via permission changes, we help by giving you better insight across your shared data.

Track administrative changes.

Administrative or privileged users hold the keys to your applications. Lepide Google Workspace Auditor can help you keep account of all administrative activities from privilege escalation to system configuration changes; ensuring the applications and data are available only to the people who actually need access.
