Lepide AI

Turning security visibility
into usable insight.

Security teams don't lack data – they lack clarity. Lepide AI changes how you interact with your data. Instantly surface the insights you need without digging through dashboards or building manual reports.

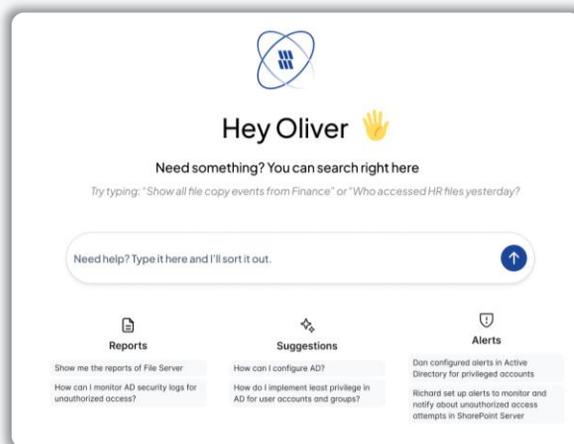

Cut through the **noise** and
focus on what matters.

Lepide AI transforms security alerts and audit events into clear, contextual insight — helping you quickly identify misconfigurations, over-privileged access, and risky behavior before they turn into incidents. Lepide AI eliminates alert fatigue, allowing you to focus on the alerts that matter most to the security of your identities and data.

Get AI-powered **audit insights**.

Use natural language searches to query your audit data directory. Lepide AI returns structured, contextual answers – helping you surface relevant activity, changes, and access events – without manually building reports or navigating complex dashboards. Your team becomes more efficient, and more effective.

Lepide AI

Frequently asked questions

What exactly does Lepide AI do?
Lepide AI acts as an intelligence layer synthesizes information from the Lepide Data Security Platform. It enables users get simple answers to simple questions, as well as generate reports through prompts. Lepide AI also pushes real time alerts to you and helps you to configure and adjust alerts.

Does Lepide AI take action automatically?
At this stage, Lepide AI will not take any action automatically – it surfaces insight and provides options.

Is Lepide AI replacing existing reporting modules?
No – Lepide AI enhances existing reporting modules and workflows, it does not replace them.

What types of questions can I ask?
Any audit-related question you can think of? Some good places to start might be: "How many admin users do I have?" "Who accessed HIPAA tagged files yesterday?" "What permission changes occurred this week?"

What does Lepide AI have access to?
Lepide AI works on audit data already collected by the Lepide Data Security Platform.

Is our data sent to a public LLM?
Whilst Lepide leverages Azure Open AI, all of your data is self contained within the Data Security Platform and does not get sent to any public LLMs. Lepide AI is therefore compliant with all regulations.

Can Lepide AI hallucinate?
Whilst all LLMs are prone to occasional hallucination, Lepide AI works by translating queries into platform logic, operating on audit data within your environment – it is not generating speculative insight. Reports can be viewed and validated. Lepide AI is, therefore, incredibly accurate.

Does Lepide AI require additional setup?
Yes – some small configuration steps are required, including obtaining an Azure Open AI license. The Lepide team will help install and configure Lepide AI.

Is Lepide AI just a chatbot?
No – Lepide AI turns security visibility into usable insight. It helps you make sense of audit data to make better, faster decisions.

What is the plan for Lepide AI in the future?
Lepide AI will eventually become the primary way of interacting with the Lepide Data Security Platform – acting as an independent member of your SOC team to keep your identities and data secure.

Is Lepide AI included in my license?
Yes – all Lepide Data Security Platform plans (Core, Plus, and Advanced) include Lepide AI as standard.
