Speed up and simplify IT management with instant visibility and control.

Lepide Auditor will help you speed up and simplify time-consuming tasks that often consume the free time of the IT team. Lepide can easily restore unwanted changes, such as deleted objects, investigate the source of account lockouts in AD, and remind users to reset their passwords at regular intervals.

State in time audit reports to identify risky configurations.

Identify states and configurations that are posing risk to your sensitive data. Spot data open to all users through open shares, identify inactive users and stale data, list users with non-compliant passwords, and much more.
