2.1 Supported Intra-forest / Intra-domain (Same Domain) Migrations

The following migrations are supported between two Exchange Servers, which can coexist in the same domain or forest.

Source	Target	What LepideMigrator for Exchange Migrates								Pre-Migration Analysis	Deploy Agents	Create Mailboxes	Job Scheduler	Data Synchronization
		User Mailboxes	Archive Mailboxes	Public Folders	Limits, Properties, Permissions	Global Address List	Outlook Rules	Outlook Profiles	Outlook Folder Permissions

The solution supports Public Folder migration between two Exchange Servers (up to 2010) in the same domain. However, Public Folder permissions, limits and properties will not be migrated.

> NOTE: The administrator has to create a different Public Folder hierarchy other than the default root in the target Exchange Server in order to migrate the Public Folders.
