LepideAuditor Suite

What's New in Version 17.0?

1. Introduction

This document explains the new additions and enhanced features introduced in the newly released LepideAuditor Suite 17.0.

2. Threshold Alerts for File Server Auditing

Alerts for File Server has been moved from "LepideAuditor for File Server – Settings Console" to "Alerts Tab" of the main console. Now, a user have to follow the same steps for creating an alert for File Server, which are required to create alerts for other server components.

> NOTE: After upgrading LepideAuditor Suite to the new version 17.0, all previously created alerts for File Server will be removed and there is no way to retrieve them back. Therefore, it is suggested to note down the details of File Server alerts manually before upgrading the solution.

Threshold alerting has been added for File Server Auditing. The users can now use "Alerts" Tab to create real-time and threshold alerts for any critical change at the File Server. While creating the alert, threshold alert is available the page of setting filters at the bottom right side.

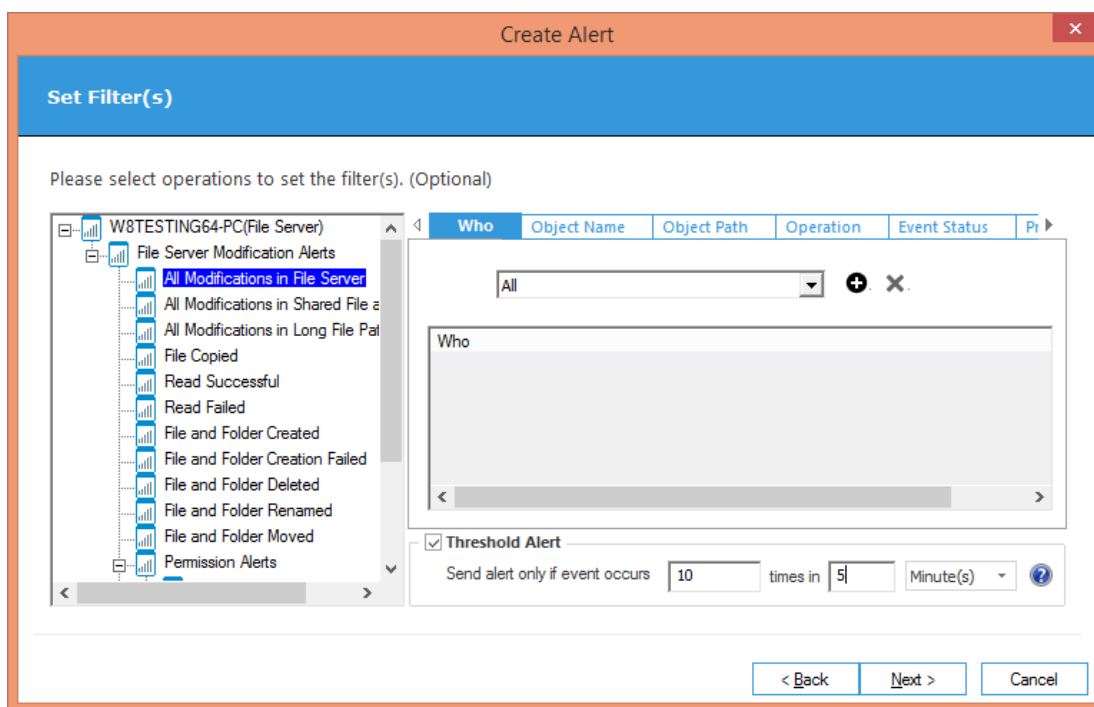

Figure 1: Threshold alert

Once threshold option is enabled, you can specify when to send an alert. For example, you can set that an alert will be sent when the event occurs 10 times in five minutes.

In previous versions, the alerts were sent through network messages, email, and text messages on cell phones. The options to send alerts through network messages and text messages has been removed.

Now, the alerts can be send as updates to LiveFeed widget in Radar Tab, as email to the selected recipients, and as push-notifications to LepideAuditor App for Android and Apple iOS devices.

3. Bug Fixes

Minor bugs fixes offer better functionality.
